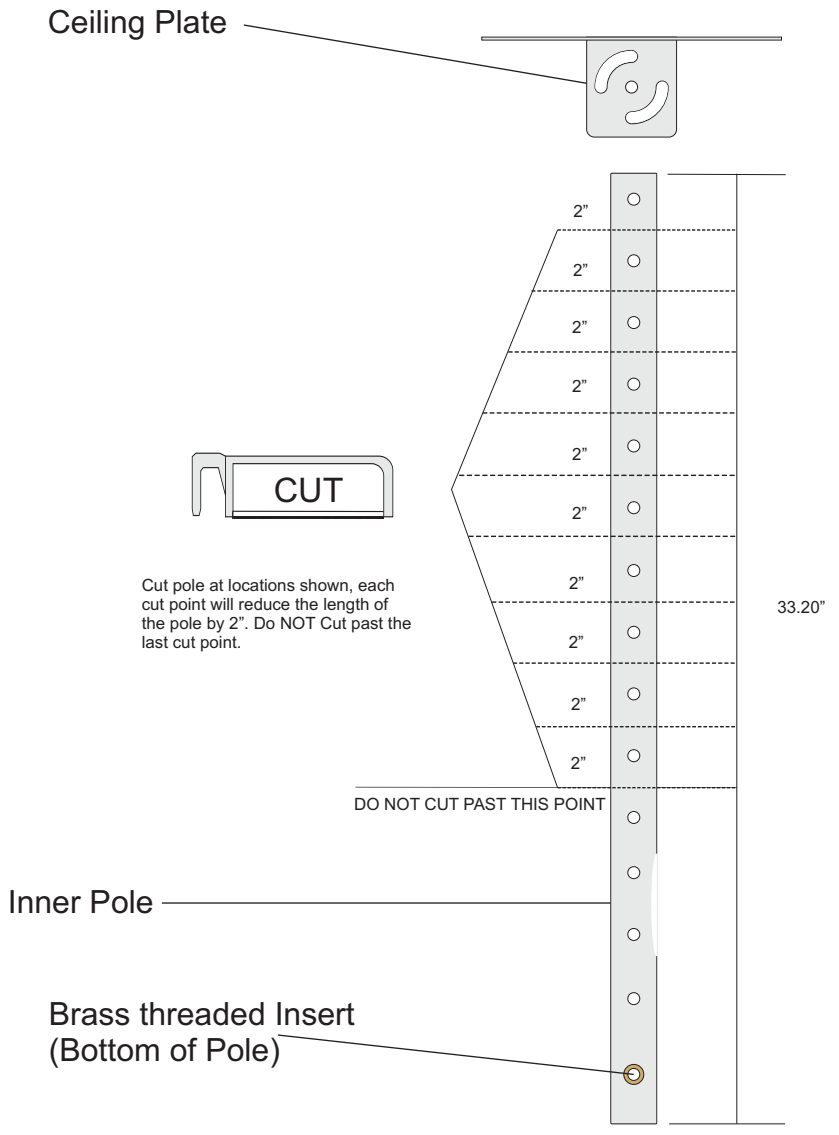
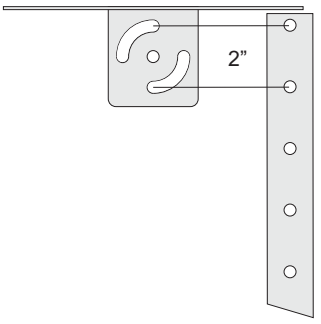
CM-560 / CM-660 TV Ceiling Mount Pole Modification

Single Pole Mounting & length reduction.



Inner Pole connects to the Ceiling Plate. Pre-drilled holes will align. Insure proper clearance spacing between the top of the hole and ceiling plate.



This mounting modification will allow the overall drop to be reduced up to 18” in 2” increments by using the inner pole only and cutting the pole to the desired length. This method does not reduce the weight handling limits of the mount, but will eliminate the left /right swivel feature of the mount. Use the diagram above when determining cut locations and length to be removed. Follow the instructions included with the mount to complete installation.
If you have any questions in regards to the modification, please contact us or consult a installation professional.
